What does the fund invest in?

The fund seeks to provide regular income and preserve capital by investing primarily in, or gaining exposure to, a diversified portfolio of investment-grade Canadian corporate bonds denominated in Canadian dollars each maturing in 2031, which corresponds to the expected year the fund will terminate. It is anticipated that the fund will terminate on or about November 30, 2031. To seek to achieve this, the fund may, in any combination, invest in units of an exchange-traded fund (including those managed by TDAM); invest directly in such investment-grade Canadian corporate bonds; or gain exposure to such bonds through the use of derivatives. In addition, the fund may invest in, or have exposure to, foreign securities to an extent that will vary from time to time but is not typically expected to exceed 30% of the total value of the assets of the fund at the time that foreign securities are purchased.

How risky is it?

The value of the fund can go down as well as up. You could lose money.

One way to gauge risk is to look at how much a fund's returns change over time. This is called "volatility".

In general, funds with higher volatility will have returns that change more over time. They typically have a greater chance of losing money and may have a greater chance of higher returns. Funds with lower volatility tend to have returns that change less over time. They typically have lower returns and may have a lower chance of losing money.

Risk rating

TDAM has rated the volatility of this fund as **low**.

Because this is a new fund, the risk rating is only an estimate by TDAM. Generally, the rating is based on how much the fund's returns have changed from year to year. It doesn't tell you how volatile the fund will be in the future. The rating can change over time. A fund with a low risk rating can still lose money.
