Notes:

1 The yield to maturity of a bond is stated as an interest rate and represents the present value of a bond's future coupon payments plus the difference between the bond's current market price and its maturity value. The yield to maturity considers not only the coupon income but also the reinvestment of coupons received and any capital gain or loss on the bond if held to maturity. The Weighted Average Yield to Maturity - Net of Fees shown here is the average yield to maturity of the underlying bonds held in the ETF weighted by the relative proportion held in the portfolio. The Weighted Average Yield to Maturity - Net of Fees is shown less of the estimated Management Expense Ratio (MER) of the ETF (excluding other fund expenses). The MER is estimated by taking the ETF's management fees and applying an estimated HST rate of 13%.

2 Weighted Average Yield to Maturity - Gross of Fees is shown gross of management fees and other expenses. Investors can expect the value of the ETF to be reduced by the ETF's management fees and other expenses.

3 Weighted Average Coupon is the weighted average of the coupon rate of each underlying bond held by the ETF. The coupon is the interest rate applied to the principal amount of the bond and indicates the interest income that is expected to be received by the ETF annually (usually in bi-annual payments).

4 Weighted Average Current Bond Yield is the weighted average of the coupon rate over the price paid for each bond held. Current bond yield provides an indication of the total profitability of a bond by taking into account whether the income received from the coupon will be offset or added to by losses or gains paid on the principal amount. Unlike Weighted Average Yield to Maturity the Weighted Average Current Bond Yield does not take into account the reinvestment of coupon interest.

5 Weighted Average Credit Quality is the weighted average of the credit ratings from all ratings agencies that rate the bonds held in the ETF.

6 Weighted Average Term (Years) is the weighted average of the term to maturity of the bonds held in the ETF.

7 Weighted Average Duration (Years) is the weighted average of the duration of the bonds held in the ETF.

8 A count of the number of bonds held in the ETF.

9 The sum of the ETF's par values divided by the number of units outstanding. Reflected in CAD or USD as applicable to each ETF.

The information contained herein has been provided by TD Asset Management Inc. and is for information purposes only. The information has been drawn from sources believed to be reliable. Graphs and charts are used for illustrative purposes only and do not reflect future values or future performance of any investment. The information does not provide financial, legal, tax or investment advice. Particular investment, tax, or trading strategies should be evaluated relative to each individual's objectives and risk tolerance.

Commissions, management fees and expenses all may be associated with investments in ETFs. Please read the prospectus and ETF Facts before investing. ETFs are not guaranteed, their values change frequently and past performance may not be repeated. ETF units are bought and sold at market price on a stock exchange and brokerage commissions will reduce returns. Certain statements in this document may contain forward-looking statements ("FLS") that are predictive in nature and may include words such as "expects", "anticipates", "intends", "believes", "estimates" and similar forward-looking expressions or negative versions thereof. FLS are based on current expectations and projections about future general economic, political and relevant market factors, such as interest and foreign exchange rates, equity and capital markets, the general business environment, assuming no changes to tax or other laws or government regulation or catastrophic events. Expectations and projections about future events are inherently subject to risks and uncertainties, which may be unforeseeable. Such expectations and projections may be incorrect in the future. FLS are not guarantees of future performance. Actual events could differ materially from those expressed or implied in any FLS. A number of important factors including those factors set out above can contribute to these digressions. You should avoid placing any reliance on FLS.
